

VCTALK-SAFE®

One device with two mobile numbers

Talk-Safe® splits your personal device in two. Providing you with a brand-new virtual business line allowing you to keep private and work communications separate without the excessive costs of purchasing a second device.

Encrypted group chat (replaces WhatsApp)

Using apps such as WhatsApp in a work environment is likely to be breaching compliance protocols. We always offer end-to-end encryption with message archiving and remote administrator control to ensure compliance and high levels of productivity.

In App recording and call-playback

- Quality assurance and performance monitoring
- Improve customer service through dispute resolution and risk management
- Use call recordings as a tool to coach staff on call handling techniques and customer interactions, to improve overall performance.
- Regulatory compliance and internal adherence to company policy

Call Scheduling with Auto-Start

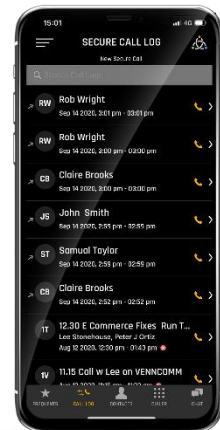

Call scheduling and auto start are two powerful features that set Talk-Safe® apart. Schedule a call for a date and time or to repeat on certain days and the app will automatically dial all participants for you.

Full featured conference calling included

Users can host or join conference calls with virtually unlimited participants with crystal clear audio. Combine this with our scheduling, auto start, and recording features, and conferences have never been easier!

Financial Services and GDPR Compliant

Talk-Safe® has been created to resolve GDPR and Compliance challenges for mobile communications. If you have any questions about how Talk-Safe® works to solve these challenges, please don't hesitate to contact us.
